SS-MINI PROJECT

Client Side

Code Flow Diagram

- * Server Runs Function to access database to update or send request sent by user.

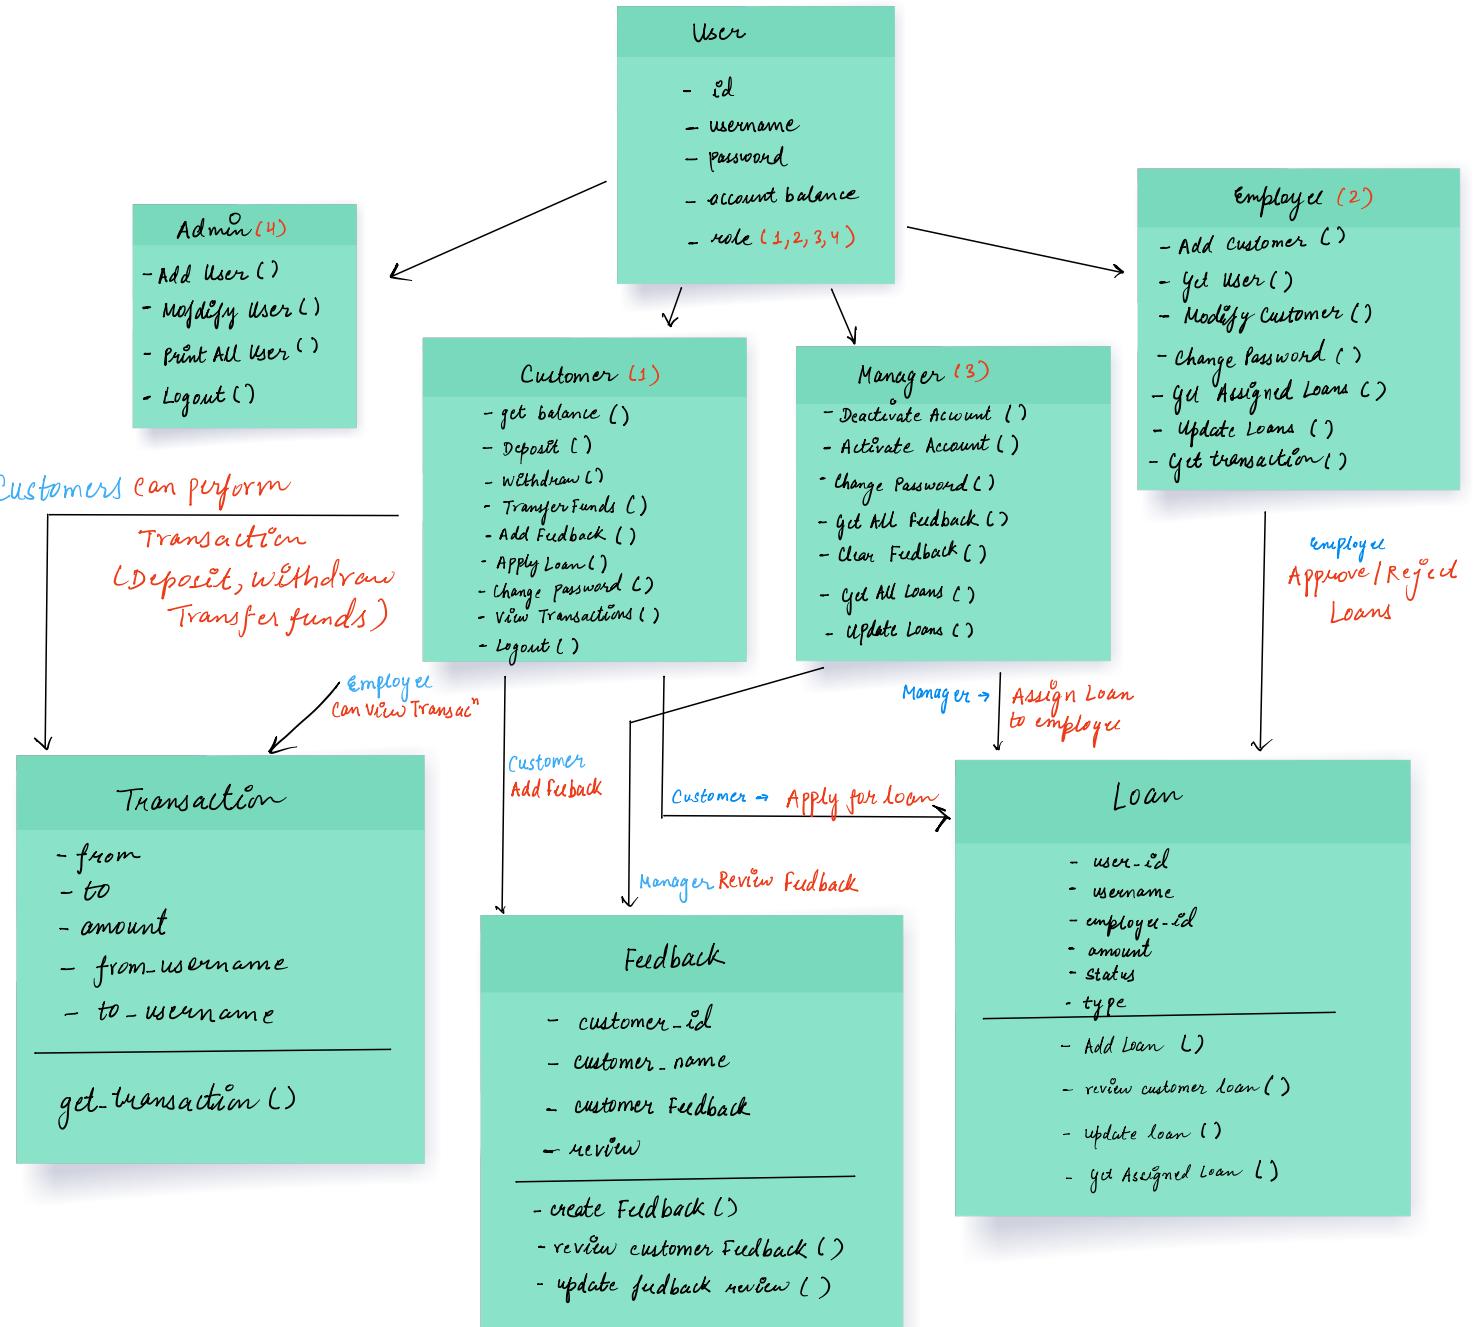

Note: All parameters are not used everytime sometimes we need only user so we only send user and other are garbage values

Request

```
User user;  
char action[50];  
float amount;  
int transfer_id;  
Feedback feedback;  
Loan loan;
```

- * Client Sends Request Object which contain detail to update and action like "Add employee", "Deposit" which than server decodes and gives response and perform necessary updates

- Future**
- ① Scope of Improvement :-
- ① Can implement Password Hashing.
 - ② Can Implement Joint Account Functionality.
 - ③ Can Improve Class definitions
 - ④ Naming conventions (Improve Readability)
 - ⑤ One session per User.
 - ⑥ More Use of Constant in Project.
